Meet Alex — The Late-Night Job Seeker

Thursday Interview. It's Tuesday Night.

Alex is a:

- Software Engineer with 1 YOE fresh outta college
- Not apart of any training program or career community
- Not a cracked coder, just wants to clock into his 9-5

A google search of "Software Engineer @ Magmutual interview tips" gets them nonsense

An hour in, they haven't found a single usable resource. The anxiety isn't about the interview anymore. **It's about not being able to find help.**

☐ Alex is on a time crunch too!

Google Sucks

The Internet is Broken for Job Seekers

Google is terrible and filled with SEO spam.

What links are legitimate/non affiliated

No guarantee of quality

- ❏ What if there existed something that pulled in high quality, reliable sources, without the fifth?

Introducing InterviewLuck.io

- **Job Title, Location, Company:** That's all we need. No account needed, sign up, subscription or mailing list
- **High-quality sources:** Sources that have been verified by IBM's top recruiter, no random sites that gamed SEO to get to top search results.
- **We're doing SMART searches FOR YOU:** Not just interview prep links, but exec boards, recent news, SEC findings
- **Understandable Presentation:** Four boxes with 4-6 results per link

Competitors & the Landscape

Claude/GenAI/LLMs

Use our tokens instead! LLMs are not adept at searching either.

Google with AdBlocker

AdBlocking only blocks ads, doesn't gate for quality. Could get AI slop easily

Paywalled Platforms

High-quality content locked behind subscriptions — a real barrier for unemployed or underemployed candidates.

LinkedIn

Built on affiliation and sponsored content — no guarantee results are useful or unbiased. They profit from job listings and recruiter subscriptions, creating the same incentive misalignment as Google.

UNIQUE SELLING POINTS

Why InterviewLuck Wins

Affiliate-Free by Design

No referral revenue. Every result is ranked on quality — not commission potential.

Custom Ranking Logic

Layered search algorithms over Brave, YouTube, OpenAI, and Claude — not raw LLM passthrough.

Cost-Conscious Architecture

Search efficiency is built in. Token cost per query is a first-class engineering concern.

How We Measure Success

Winning Metric

Useful-result click rate — did the user click a result and not immediately bounce back? Paired with **return visits** — a signal the tool actually helped them prepare.

Guardrail Metric (our assessment of sustainability)

API token cost per search — every query touches four APIs (Brave, YouTube, OpenAI, Claude). Search efficiency isn't just UX. It's unit economics. Cost must stay predictable and sustainable.

What We're Building & When

1

Now — 2 Months

Core search quality polish. Token efficiency tuning. Resume-to-job-description keyword matching to surface the most relevant prep.

2

Next — 4 Months

Saved searches, user accounts, and additional content sources — including general interview advice beyond role-specific prep.

3

Later — 6 Months

Ambitious: personalized prep plans based on role and timeline. Mock interview tools. The full prep companion.

The Rollout Plan

Built to Be Independent

FastAPI on Railway

Lightweight, fast backend. Deployed and scalable without heavy infra overhead.

Brave + YouTube APIs

Independent search sources — no Google dependency, no algorithmic bias toward ad revenue.

OpenAI + Claude

Used with custom logic layered on top — not raw passthrough. Quality and cost controlled by the product, not the model.

Custom Ranking Logic

The core IP. Search and ranking algorithms that prioritize result quality over engagement metrics.

Demo

Summary

Independent

No affiliate deals. Ever.

Efficient

We're getting straight to useful prep in 3 minutes or less

Focused

One user. One moment. Done right.
